

Germany

Name of the programme
Innovations for Tomorrow's Production, Services, and Work
Funding agency
Project Management Agency Karlsruhe – PTKA Karlsruhe Institute of Technology – KIT
Beneficiaries
SMEs, Large Companies, Universities, Research Organisations
Thematic restriction
Advanced Manufacturing
Type of research eligible for funding
The programme " Innovation for Tomorrow`s Production, Services and Work " is a nationwide support programme in Germany (since 2014). In the previous production technology programme (1999-2014), many activities are related to advanced manufacturing which will be continued in the new programme. Resent topics of the national calls were "Nano goes production (2006)", "Production of micro optical components and systems (2007)", "Manufacturing of local functional surfaces for higher resource efficiency (2008)", "Production for electro-mobility (2009)", "Light weight construction (2010)", "High Performance Manufacturing (2013)", "Industry 4.0 (2014)" or "Additive Manufacturing (2015)". The support of advanced production technologies needs coordination with the basic and application development oriented support in order to enhance the completion of value chains for quick market access.
Maximum duration of projects
Maximum duration set in the MANUNET Call 2017 (24 months) applies
Eligible costs
Personnel Cost, Capital Investment/ Equipment, Travel Cost, Overhead, Indirect Cost, Subcontracting, Patenting (depending on the organization type)
Limits of funding
None
Other eligibility requirements
Type of funding (grant/loan/mixed/other)
Grant

Funding rate
Up to 50% (private-for-profit), Up to 100% (non profit organisations)
Geographical coverage
Germany
National/regional deadlines
Tbd
